Levshina A.A.
Teaching of Psychology at Various Levels of School Education

World is changing rapidly nowadays. New inventions appear almost every day, events that happen around us every minute can change the course of history. This certainly leaves a visible print on psychology: in such conditions lability, an ability to interplay with rapidly changing reality, should become the major feature that every individual needs to obtain. In this sense psychological competence is paid special attention. It can be divided on four main types: cognitive, social, communicational, autopsychological.

However, psychological competence being obviously important is not sufficiently observed in Russian educational practice. Such academic discipline as "Psychology" does not exist in Russian curriculums; schools with over one thousand students generally have one psychologist in their staff. In such conditions we can hardly even talk about any kind of psychological competence. Although it is the level of student's psychological competence that determines his or her leadership potential, ability of team work, professional choice, stress resistance.

All these factors determine the importance of educational programmes oriented on formation of psychological competence both for one individual and for the society in whole.

Keywords: Psychological competence, teaching of psychology, school education, professional choice

Features of valuable orientations of young men – representatives of various informal associations

In article the problem of influence of youth subculture on change of the person of the young man, on formation

of its special forms of behaviour rises. The problem urgency speaks a number of circumstances: disintegration before existing steady social groups which provided youth socialisation, occurrence of set of various informal currents, communities in which own system of values, installations, models of behaviour, vital styles is formed.

The subculture is considered as system of the values, the steady samples of behaviour inherent concerning a small social generality, spatially and socially by to a greater or lesser extent isolated. An essential role in occurrence of youth subculture it is taken away to features youthful age. Grouping, self-affirmation, search of the «I» are internal requirements of the young man.

Keywords: sense of lifes orientations, subculture, informal youth associations.

The peculiarities of labour migrant's image transmission in russian media

Nowadays the problems of migration and migrants integration are up-to-date in contemporary Russian society as well as all over the world. Media plays a great role in forming our opinion about other nations.

According to the undoubtful influence of media on labour migrant's image creation and migration situation in the country and to the importance of tolerance in our multinational region, it's necessary to analyze the means of images transmission through media and to evaluate the results of these process in various social layers.

Keywords: migration, integration, image transmission, non-recognition, derision, regulating, respect.

The ethnic identity in adolescence among representatives of different nationalities living in the same region

Despite the large number of studies of ethnic identity, the important issue of how aging changes of awareness of their ethnicity in general and in adolescence in particular, has been studied very superficially. There is an assumption that, studying the formation of ethnic identity in this age, we can also obtain information about inter-ethnic interactions in the environment where it occurs.

Keywords: ethnic identity, adolescence, inter-ethnic interaction, toleration.
