Features of the background electrical brain activity of young people with different individual characteristics

In this paper we study the cardinality features of background EEG in boys and girls with different levels of creativity, achievement and the type of lateral organization (TLO). The influence factors of sex, level of creativity and the TLO on the power characteristics of the EEG. Revealed a large left parietal activity, central and right occipital areas of the brain at rest, boys and girls with high levels of creativity, temporal and parietal areas of the left hemisphere of the brain in boys and girls from middle-and low-creativity. It is shown that in the resting state functional hemispheric asymmetry of background activity of the brain shows the dominance of the left parietal, middle frontal and central regions of the brain in boys and girls with the right TLO.

Key words: EEG background activity, power, sex, level of creativity, achievement levels, the type of lateral organization (TLO).
