Architecture as a text. Semiotic analysis of architectural space

Semiotic studies as a branch of science зародилось originated in the 60s of the 20th century as an analytical tool for exploring systems of signs and mechanisms of emergence of meanings. Semiotic studies have extended fairly quickly over the large area of various scientific fields not related to each other at the first sight. In the present study semiotic interpretation of architectural space is explored. Apart from the direct functional content architecture contains a plethora of visual and ideological messages. The purpose of the present study is to reflect this issue and to examine how the stated topic has been represented in both Russian and global scientific schools.

General review of semiotic interpretation of space is given as well as the main approaches to the issue and the most prominent researchers of Russian tradition of semiotics of architecture are represented.

Keywords: semiotics, architecture, space, form, environment, text, context.
